

Willem (Will) Crone

Senior Software Engineer | Full-Stack, Mobile & CMS | Healthcare Technology

Nashville, TN • 540-797-7345 • will.crone11@gmail.com

[LinkedIn](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of experience shipping enterprise healthcare applications to **millions of monthly users**. Lead or co-lead developer on 7 HIPAA-compliant engagements across web and mobile, promoted twice at Modea. Full-stack generalist fluent in **React, Next.js, and TypeScript**; company-designated **WordPress subject-matter expert**; comfortable owning the full stack from frontend architecture through CI/CD, performance, and security. Deep AI-assisted development practice — daily driver of Claude Code, Cursor, and Gemini CLI across production work, with active engagement in the evolving tooling landscape. Active technical consultant and mentor to internal and client development teams.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), PHP, Python, HTML5, CSS3, SCSS

Frontend: React, Next.js (App Router & Pages Router), React Native, Ionic, Redux, Tailwind CSS, Gutenberg, Twig

Mobile: Ionic + React cross-platform, React Native, iOS & Android deployment, Xcode, Android Studio, App Store and Google Play release pipelines

Backend & CMS: Node.js, WordPress (custom themes, Gutenberg blocks, ACF, plugins), Drupal (vanilla and headless), PHP, REST APIs, Firebase

AI-Assisted Development: Claude Code, Cursor, Gemini CLI, GitHub Copilot, MCP server integration (Figma and Playwright); agentic workflows for code generation, refactoring, debugging, and research

Design Collaboration: Figma, design system implementation, component library architecture, design-to-code translation

Cloud & DevOps: AWS (Amplify, CloudFront, CloudSearch, S3), Pantheon, Docker, GitHub Actions, Bitbucket Pipelines, Jenkins, SonarQube, Snyk

Search & Data: Solr, AWS CloudSearch, Relevanssi, Yext, Redis (Object Cache Pro), Google Maps & Places APIs

Healthcare Integrations: Epic, MyChart, Press Ganey, Staywell, Yext provider data, HIPAA-compliant data handling

PROFESSIONAL EXPERIENCE

Modea — Nashville, TN | *Aug 2021 – Present*

Software Engineer I → II → III · Promoted twice · Lead or Co-lead developer on 7 enterprise healthcare engagements.

Siteman Cancer Center — Lead Developer | *Mar 2025 – Present*

WordPress redesign & ongoing site maintenance · Sites: live-siteman-washu.pantheonsite.io | siteman.wustl.edu

- **Built 19 custom post types and 20+ custom, reusable Gutenberg blocks** as the foundation of a new custom WordPress theme and content system — **preparing to launch July, 2026**
- **Delivered perfect 100/100/100 Lighthouse scores (Performance, Accessibility, Best Practices)** — up from 44/76/74 on the legacy production site (average across the top 10 most-visited pages)— via a template-based asset loading system (CSS, JS), multi-layer caching (Pantheon Advanced Page Cache + Redis/Object Cache Pro), and site-wide .webp image optimization
- **Cut Largest Contentful Paint from 6.3s to 0.6s (90% faster) and First Contentful Paint from 4.4s to 0.5s (89% faster)** between the legacy site and the redesign, moving all Core Web Vitals into Google's "Good" threshold across the site's most-trafficked templates
- Modernized hosting to **Pantheon** and built out a **full GitHub Actions CI/CD pipeline** (DEV deploys, SonarQube scans, daily backups)

- Engineered “**Find Your Way**” — a Miro-like drag-and-drop wizard builder (vanilla JS + SCSS) that lets editors author branching multiple-choice question flows to allow patients to identify their needs and find relevant content quickly

Vanderbilt Health Ecosystem — 2+ years

React · Next.js · TypeScript · Headless Drupal · AWS Amplify · Yext · GitHub Actions

Sites: vanderbilthealth.com, childrenshospitalvanderbilt.org, myhealthwalkin.com

- Inherited and modernized a 6-year-old **headless Drupal + React/Next.js** ecosystem — three Next.js frontends, a shared search application, and an internal component library serving a major academic medical center
- Spearheaded **Next.js upgrade and migration (Pages Router → App Router)**, **merging three frontends into one repository** (differentiating between them using environment variables). This near-complete refactor covered server components, new data-fetching patterns, layout rearchitecture, and routing, ultimately eliminating 6+ years of accumulated React/Next.js technical debt and **consolidating 6 repositories into 3 (50% reduction)**
- Migrated hosting from deprecated AWS Elastic Beanstalk to **AWS Amplify** — VUMC analytics showed the site performing **39% faster year-over-year** after the migration
- Cut acceptance test runtime **80% (10 min → 2 min)** via concurrent execution;
- **Introduced live reload**, eliminating 60–70s local build times and dramatically improving team developer velocity
- Reduced production security vulnerabilities **77% (1,100+ → 250)** through Snyk integration and systematic React/Next.js dependency updates
- Built a **fully dynamic, reusable Drupal module** (PHP + JavaScript + custom admin UI) that automates **Yext** provider-data sync with editor-configurable field mappings
- Developed **automated condition and treatment page generation** from the Staywell API
- Delivered a **full retheme of Vanderbilt Children's Hospital in React/Next.js** — new design system, updated component library, and refreshed user experience

MHO Reflections Companion — 6 months

Ionic · React · TypeScript · SCSS · Xcode · Android Studio

Live on [iOS App Store](https://apps.apple.com/us/app/mho-reflections-companion/id1544444444) and [Google Play Store](https://play.google.com/store/apps/details?id=com.mho.reflections) · 2-person engineering team

- Worked on a 2-developer team to build a **HIPAA-compliant mental health companion mobile app from scratch in React + TypeScript + Ionic** — single codebase deploying natively to both iOS and Android
- **100+ active patients** across iOS and Android
- Built strongly-typed **TypeScript** page templates for assessments, check-ins, journal entries, and patient profiles
- Implemented secure authentication, user profile management, and healthcare-compliant handling of patient PHI, meeting the data-protection bar required for a clinical tool
- Built out a **multiple choice assessment flow UI** and a **daily check-in flow** that connects to the client's API, pulling in patient-specific assessments and check-ins that capture mental health, physical health, and medication compliance of the patient — giving care providers a consistent longitudinal signal on each patient
- Designed interactive **data visualizations and progress graphs** in React so patients (and their providers) can see their trajectory over time
- Engineered **intelligent support-escalation protocols** that parse assessment responses and trigger appropriate flows when symptoms indicate a patient needs additional help
- Shipped a full **journaling platform** — daily prompts, free-response entries, searchable archive, and categorization for patients to vocalize internal dialog and to keep track of their thoughts and feelings
- Integrated native device capabilities (push notifications, camera) via **Ionic Capacitor** and implemented real-time data sync with offline support
- Owned both **App Store and Google Play release pipelines** end-to-end — store listings, review cycles, and incremental update cadence

Keck Medicine of USC — Lead Developer | 2+ years

WordPress · Gutenberg · Pantheon Solr · Google Maps · Site: keckmedicine.org

- Consolidated 23 sub-sites into a unified WordPress application serving ~1M monthly users
- Architected custom **Find a Location** and **Find a Provider** tools with Google Maps/Places integration, plus site-wide search powered by Pantheon Solr
- Delivered a full page-template library and 15+ reusable Gutenberg components; these patterns became the baseline for subsequent Modea engagements
- Mentored the client dev team through weekly training sessions, building durable in-house WordPress expertise

Vanderbilt Specialty Pharmacy — Lead Developer | 8 months

Atomic design · Reusable component library · Site: vanderbiltsspecialtypharmacy.com

- Delivered full redesign using atomic design principles 2 months ahead of a 6-month timeline
- Built **20+ reusable components across 5 page templates**, designed as a scalable library for **reuse across 500+ sites** in the Vanderbilt ecosystem

Additional Engagements

- **Chesapeake Regional Health** — Lead Developer — chesapeakehealth.com — Stood up the project's first Bitbucket CI pipeline, upgraded Angular v9 → current, and built an automated Press Ganey API integration for nightly physician-review sync
- **Luminis Health** — luminishealth.org — Post-launch stabilization focused on MyChart integration and a Find Care tool

LEADERSHIP & MENTORING

- Designated internal **WordPress subject-matter expert** at Modea; authored the internal WordPress best-practices playbook adopted company-wide at Modea and delivered a 3-month training program that onboarded 2 internal and 2 client developers
- Lead technical consultant for **4 enterprise healthcare clients** across multi-year engagements

EDUCATION

Full-Stack Development Certificate — Career Foundry · 2021

Bachelor of Music, French Horn Performance — Cleveland Institute of Music · 2020
